WeedEnder.com

Features

- Environmentally safe
- Strong, durable bond
- Remains flexible
- Excellent adhesion
- Easy to apply
- Won't crack
- Fast-setting
- Moisture resistant

This product is a one-part, neutral curing, medium modulus adhesive/caulk, specially formulated for primerless adhesion to the WeedEnder® material and the metal or wooden guardrail post. This adhesive/caulk is supplied ready-to-use. Under pressure it flows readily from its container, and it cures to provide excellent resistance to cold, rain,

ozone, heat and sunlight. The adhesive/caulk color is light green to closely match the U-TECK WeedEnder® material.

Used for footprints, seams and cuts for adjustments in WeedEnder®. This prevents weeds from growing in seams and around posts of all types.

Usage Notes: Do Not substitute adhesive/caulk nor apply it to wet or damp surfaces as this product is specially formulated to adhere to the WeedEnder® material and to be applied in dry conditions.
