WeedEnder.com

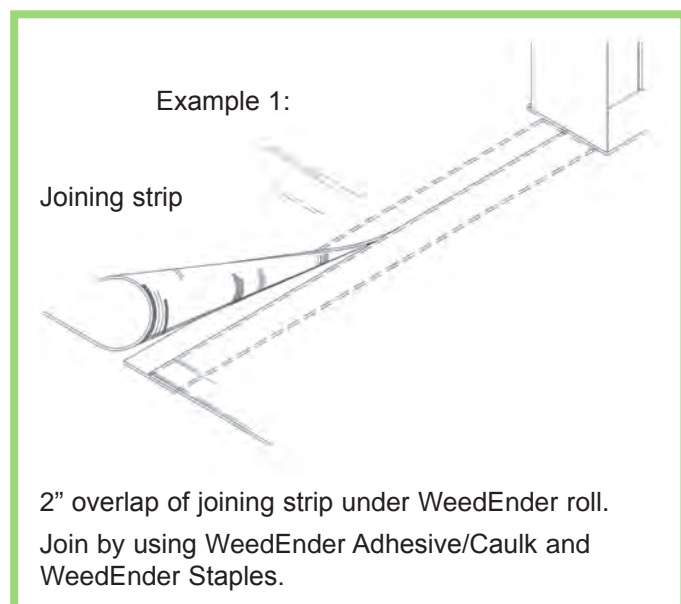

Joining Strip

Features

- Maintenance-free
- Long-lasting
- Conforms to any shape
- Easy to install
- Environmentally safe

The joining strip is constructed of the same material as the WeedEnder®.

It is used anytime you splice the WeedEnder® together, such as when joining two rolls together, making adjustments for bends and reseaming when cutting around objects. Always used when joining back WeedEnder® on punched and slit or perforated installations.

Used to eliminate any sunlight from penetrating between the two ends or sides being spliced together. See Example 1.
