Features

- Controls unwanted vegetation
- Reduces runoff
- No herbicides or poisons
- Easy to install
- Environmentally safe
- Conforms to any shape
- Designed to be abused
- Cost-effective
- Maintenance-free
- Helps control erosion
- Long-lasting
- No disposal problems
- Reusable

This type of WeedEnder® SignMat controls unwanted vegetation in an environmentally safe manner around single-post signs, such as mile markers and object markers. This is accomplished without adding to your runoff problems, as would be the case when using asphalt, concrete, or other nonporous weed-control methods. SignMat allows water and nutrients to seep through to keep the root system beneath it alive, thereby controlling erosion around the sign. And, if the sign is

moved, the SignMat can move with it because WeedEnder® can be reused.

WeedEnder® SignMat virtually stops the vegetation growth around and under signs. This allows the mower crew to proceed by at its normal speed with no stops required—and no return visits with weed eaters, herbicides or poisons. SignMat not only protects the sign from accidental damage from mowers but also provides a perfect avenue to creating a neat and manicured site conducive to positive visual appreciation.

WeedEnder® SignMat allows the signs to be read easily and without question, thus protecting both the reader and the responsible authority or municipality. SignMat is available in a variety of sizes and shapes and can be customized to specific requirements.
